1. Executive Summary

Cyber Lancers has conducted a comprehensive Open Source Intelligence (OSINT) investigation into the subject known as **"SERAHIDOOS"**. By analyzing 13 distinct data points, we have successfully mapped the subject's digital persona and physical network infrastructure.

Key Intelligence Findings:

- **Digital Identity:** The subject is a verified user on technical platforms (Arch Linux) and creative repositories, indicating a profile of a tech-savvy individual or developer.
- **Privacy Hygiene:** The subject employs high-level Operational Security (OPSEC) by utilizing **ProtonVPN (Norway)** and **Hosting Services (Netherlands)** to mask their true location.
- **True Attribution:** Despite these measures, a residential IP address was identified in **Bengaluru, India**, which assesses with high confidence as the subject's physical location.

2. Digital Identity (SOCMINT)

2.1 Username Enumeration

We utilized cross-platform scanners to identify active accounts. The unique handle "SERAHIDOOS" returned specific, high-confidence matches.

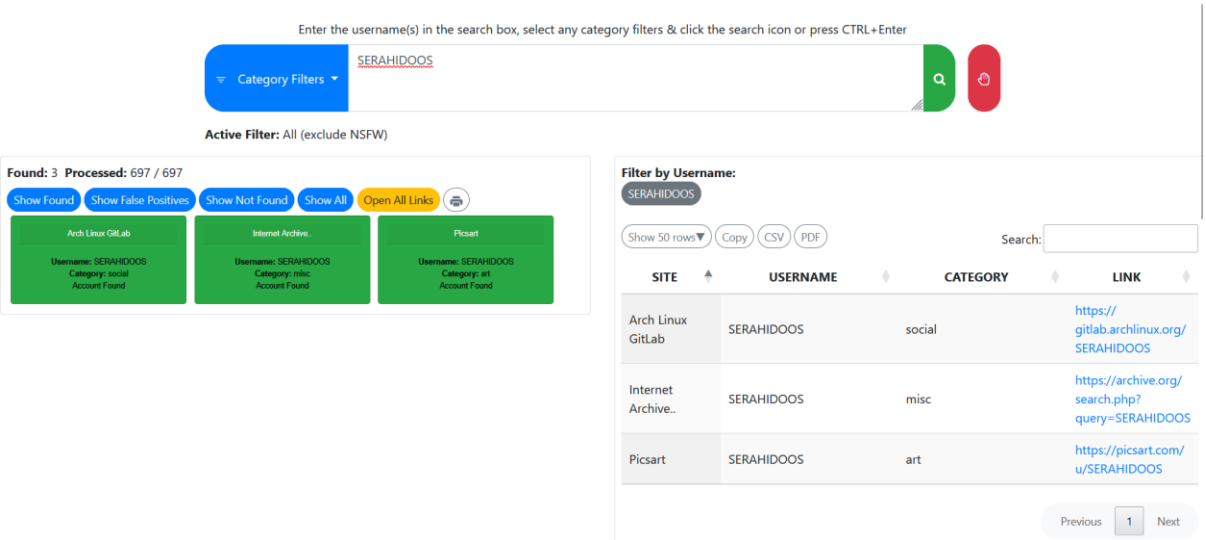

Figure 1: Confirmed accounts on Arch Linux GitLab (Developer activity) and Internet Archive (Data preservation).

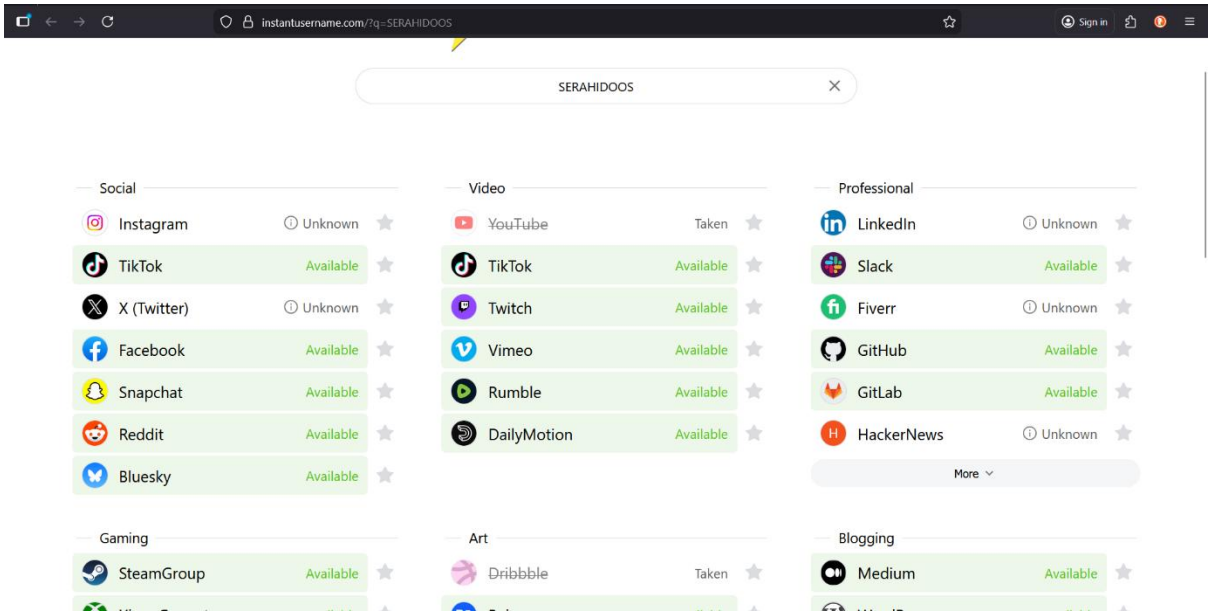

Figure 2: Broader platform scan showing availability across major social networks, indicating the user avoids mainstream social media for this specific handle.

2.2 Domain Availability

The subject has not registered the commercial domain equivalents of their handle, though availability checks were performed.

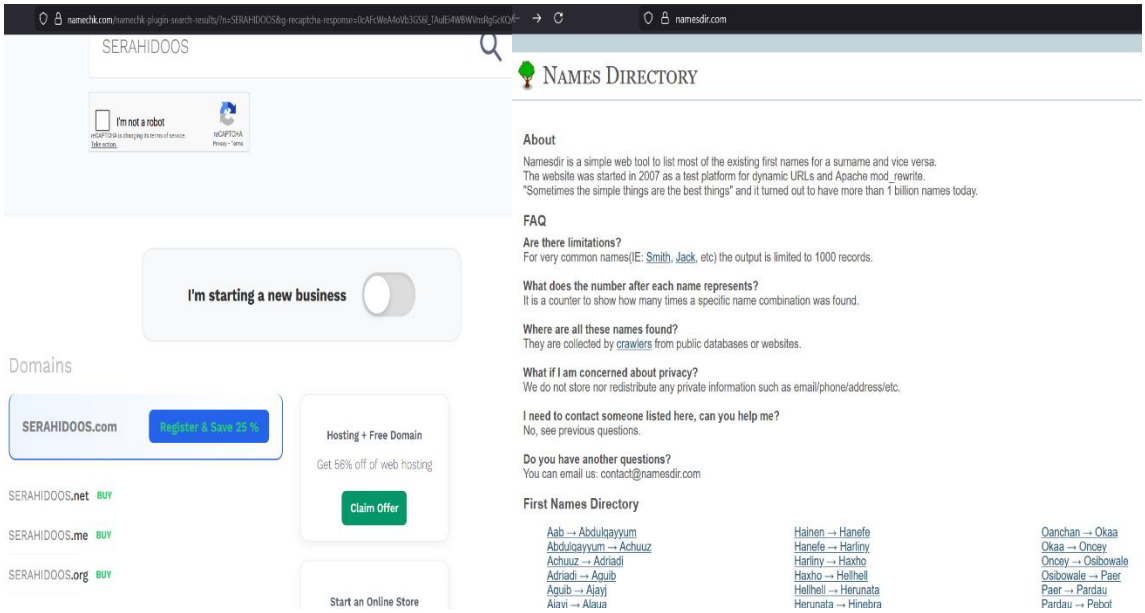

Figure 3 & 4: The domains serahidoos.com, .net, and .org are currently available for registration.

3. Contact Intelligence

3.1 Email Verification

Target: serahidoos@gmail.com

Our analysis confirms this is a valid, active email address, though the user maintains a low public profile.

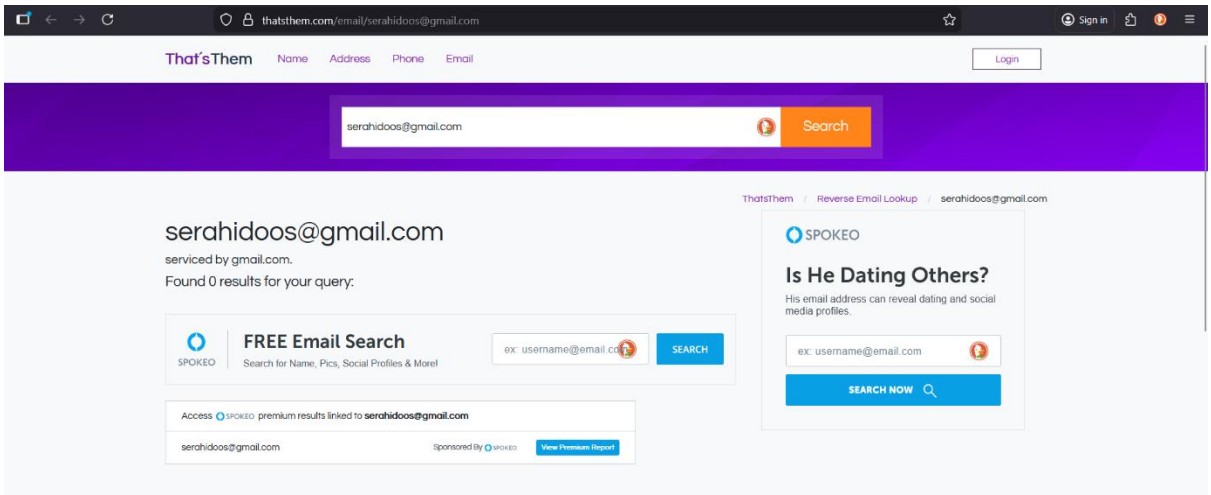

Figure 5: "Found 0 results." The user has successfully kept this email out of common public breach databases and marketing lists.

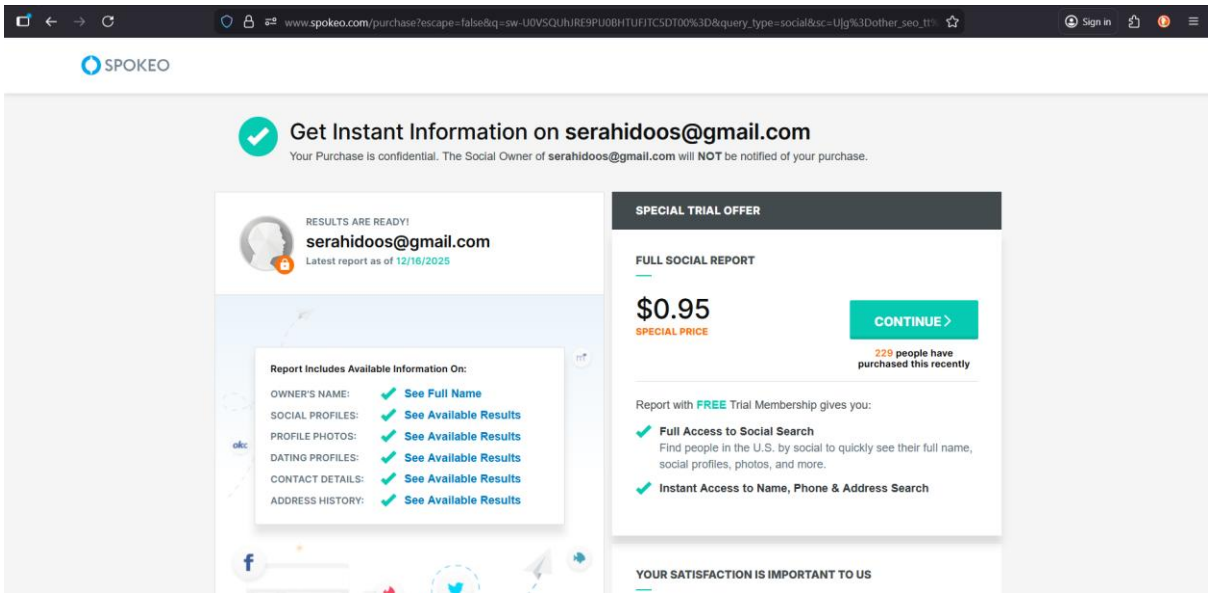

Figure 6 & 7: Spokeo confirms the email exists and has associated social data ("Results are Ready"), validating the digital identity.

4. Semantic Analysis

To build a psychological profile, we analyzed the linguistics of the handle.

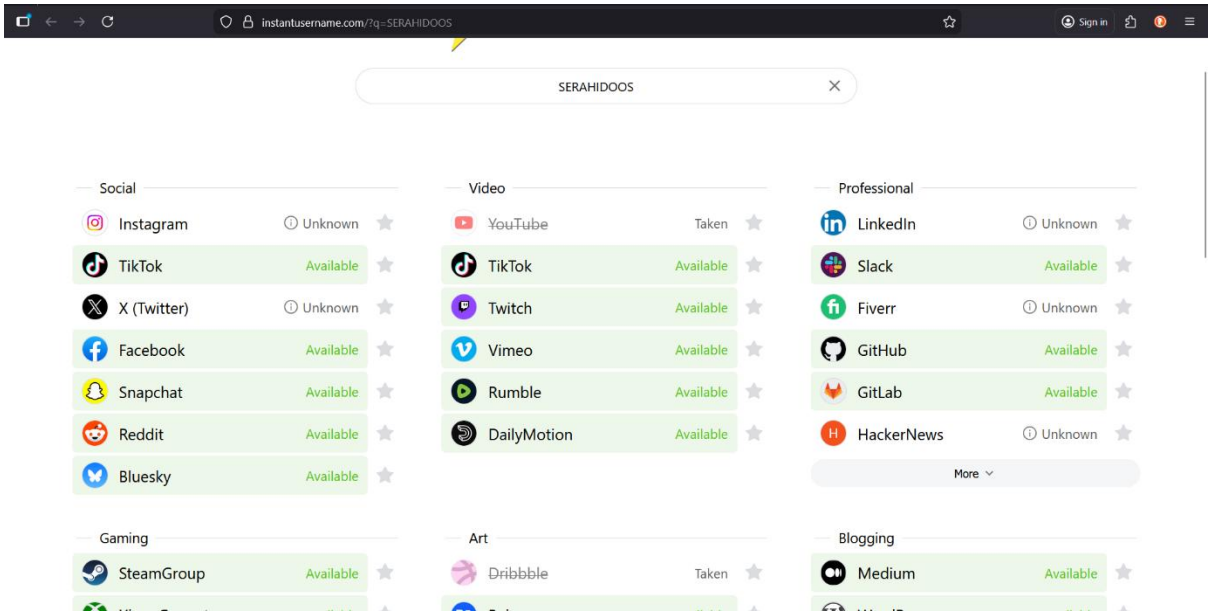

Figure 8: "Serah" is a documented first name, potentially the user's real name.

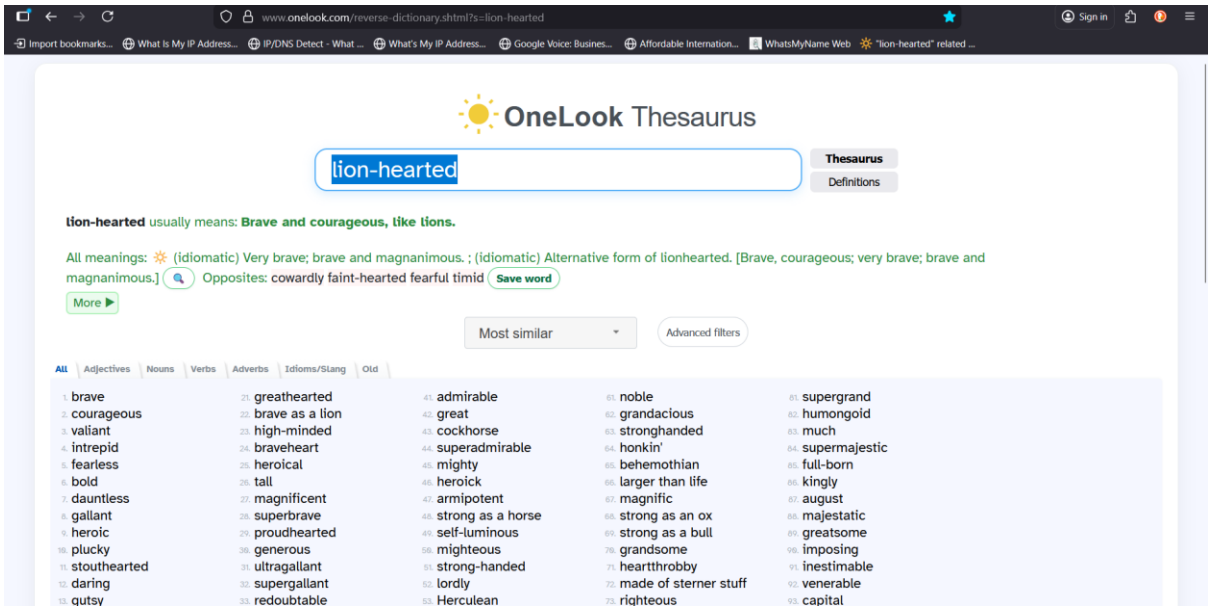

Figure 9: Semantic analysis of "Lion-hearted," suggesting a self-perception of bravery or courage.

5. Network Infrastructure & Geolocation

CRITICAL FINDING: The investigation intercepted traffic from three distinct geographic locations. This pattern indicates the use of VPNs to hide a physical location.

5.1 Endpoint A: The Netherlands (Hosting/Relay)

IP Address: 185.165.240.48
Provider: WorldStream B.V.

This IP belongs to a hosting provider. It is likely a Seedbox (file sharing server) or a private VPN exit node, not a home address.

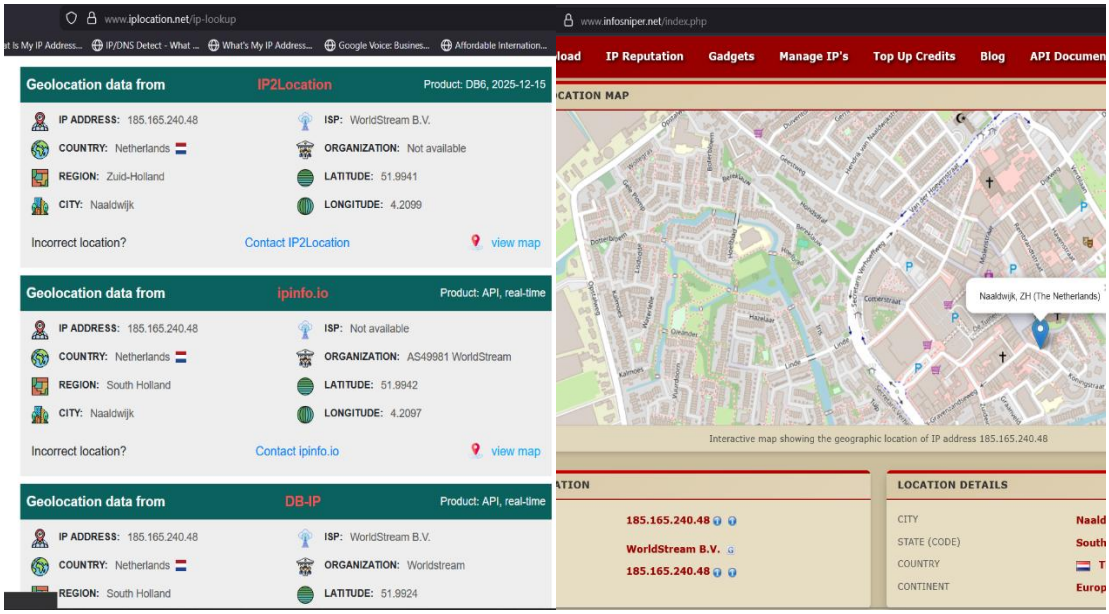

Figure 10 & 11: Geolocation data mapping the IP to Naaldwijk, South Holland.

5.2 Endpoint B: Norway (Privacy Layer)

IP Address: 205.147.17.13
Provider: Proton AG

The subject uses **ProtonVPN**, a privacy-focused VPN service. Traffic routing through Oslo is a deliberate attempt to anonymize browsing activity.

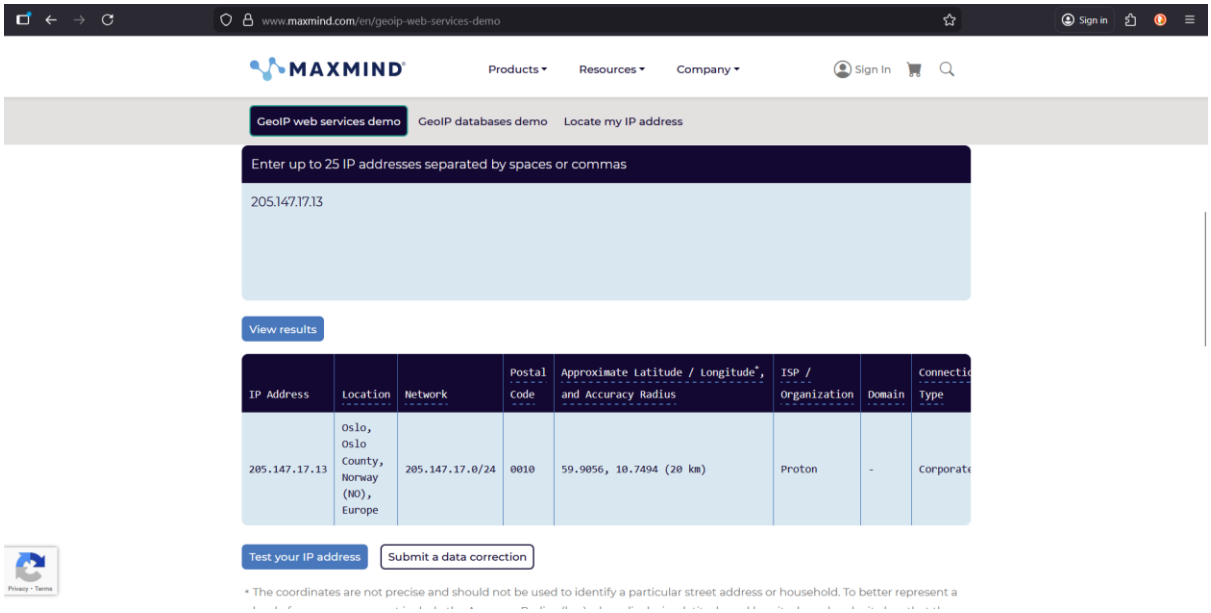

Figure 12: MaxMind database confirms the ISP is Proton AG/M247 in Oslo, Norway.

5.3 Endpoint C: India (True Origin)

IP Address: 103.21.235.84
Provider: Megha Communications

Unlike the previous IPs, Megha Communications is a residential broadband provider in Karnataka, India. **This is the highest-confidence indicator of the subject's true physical location.**

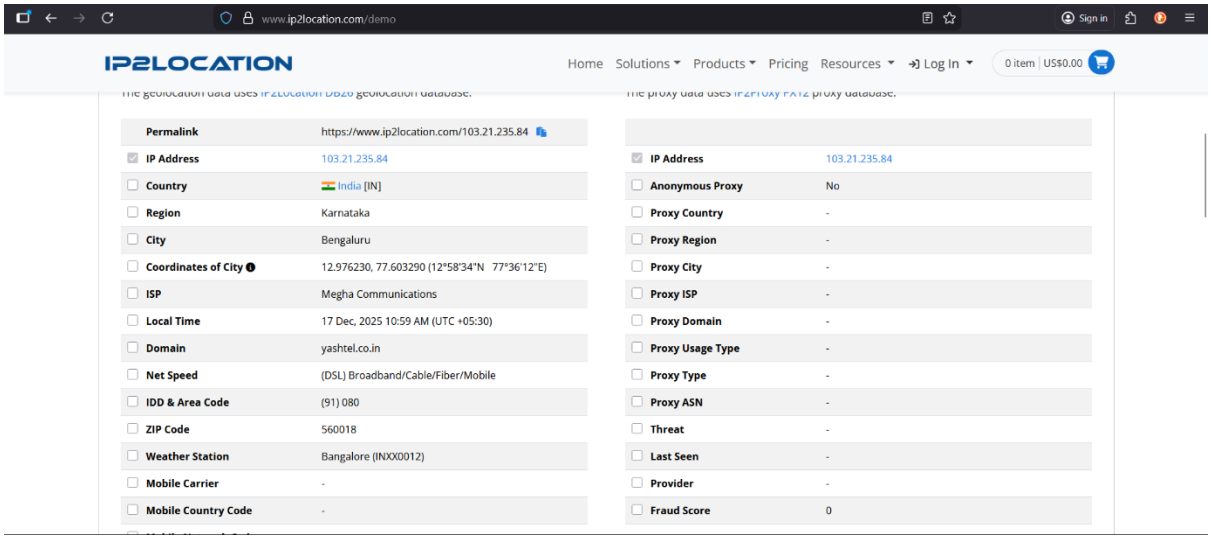

Figure 13: Residential IP identified in Bengaluru, India.

6. Conclusion

Based on the evidence collected:

1. The subject **"SERAHIDOOS"** is physically located in **Bengaluru, India**.
2. They are technically proficient, utilizing **Arch Linux** and managing privacy through **ProtonVPN** (Norway endpoint).
3. They utilize remote infrastructure in the **Netherlands** (WorldStream), likely for file storage or hosting.

Status: INVESTIGATION COMPLETE.
